PRESENTATION

The 21st Barcelona International New Roses Competition was held from 7 to 16 May 2021 in the Parc Cervantes rose garden.

The Competition aims to present new varieties created by plant breeders of new roses from around the world, to assess their features and highlight, with prizes, the ones that achieve the best results.

None of the new varieties of rosebushes have been on the commercial market.

The creators of new rose varieties are constantly working to achieve plants that meet new challenges, both aesthetic and, above all, functional, to make plants that are more resistant to disease and more adaptable to new situations such as the ones relating to climate change.

It is not just an aesthetic, formal and functional quest, but also a horticultural technical one.

The new roses are assessed by local specialists throughout their growing cycle and also by city residents at the start of the second growing cycle, in early May.

Because of Barcelona's climate and location, the New Roses Competition is the one that opens the world season for such events.

The Roses Competition is affiliated to World Federation of Rose Societies (WRFS) procedures and councils and has gained prestige and fame over the 20 previous editions among not just specialists but all those whose love gardens and roses.

The Parc Cervantes rose garden plays host to a permanent collection of over 2,000 species and varieties of roses, including those found in the wild or their hybrids throughout history. Since 2009 it has enjoyed the international distinction of Award of Garden Excellence, conferred on it by the WRFS.

Both the roses competition and the Parc Cervantes rose garden are a delight to the senses, a fount of culture and a rich environment for biodiversities, even cultivated ones.

WHY ARE THERE NEW ROSES?

Roses are one of the most universal garden plants, found in almost every garden, in every place where they can grow, and throughout the history of gardening and human culture itself.

The search for better flowers, in new tones or shades, with more or fewer petals, with new and better fragrances and plants of every size and type of growth, have brought horticultural engineering into the process. Although the search today is for better resistance and/or adaptation to adverse climatic factors, plant vitality, which implies resistance to diseases with their own resources or, with plants adapted to small gardens or through their cultivation in plant pots.

A new variety is currently obtained through hybridisation, involving two different rosebushes, generally hybrids themselves. Once they have been fertilised and seeds obtained, a long process of trial and observation begins until a plant with new qualities is found, ones that are better and different from any other already known. From the moment of its hybridisation, it may take up to somewhere between 8 and 10 years until a rose is ready to enter a competition or the commercial market.

THE ROSES COMPETITION'S MISSION

It is estimated that somewhere between 20,000 and 25,000 varieties of roses have been cultivated and named in the past. Many of these no longer exist. Whereas others have been cultivated for centuries and even since time immemorial.

Every year Barcelona plays host to the first display of dozens of the very best of these new varieties created by professional and amateur rose breeders.

Each year's winning roses are planted in the Rose Garden, enriching its collection.

Each hybridiser can present as many as 5 of their new varieties. The cultivation and evaluation process is the same for all of them, so that their qualities and capacities can be compared and objectified through an individualised score of their qualities.

Participation in a competition and receiving a distinction are both an incentive and kudos for hybridisers, helping to highlight the qualities of the new roses.

The event offers the garden's visitors an excellent opportunity to discover and enjoy the world's best roses in person, year after year.

The Barcelona competition is also part of the world circuit and has garnered recognition and prestige in the world of roses, both for the varieties entered and for the people evaluating them.

The same can also be said of the opinions and evaluations provided by visitors to the rose garden, through the Citizen Rose prize.

HOW ARE THE NEW ROSES EVALUATED?

The reception period for the new roses starts in mid-November and ends in mid-March of the following year, when the rose come out of hibernation. When they arrive, generally in bare roots, they are conditioned before they are planted and looked after until they are moved to the rose garden's competition space.

A group of ten judges, local specialists, evaluate them on four occasions during their growth cycle starting in the second week of May, then in the first week of July, in mid-October and at the end of November.

This jury evaluates nine factors, ranging from the plants' qualities and vigour to the qualities of their flowers, fragrance and new features or resistance to the summer heat, pests and diseases.

The full international jury, made up of specialists and individuals with links to the world of roses, meet up in the following May, when the flowing of the second growth cycle begins.

The expert jury awards prizes to the best varieties within each category of roses and to the best qualities too, such as new feature, best rose or fragrance intensity.

In May, the Barcelona Elderly People's Council and the Escola de Jardineria Castell de Sant Foix (Santa Maria de Martorelles) also express their opinions on the new roses. The students attending schools in Barcelona usually take part too.

The Citizen Rose prize is of special interest for the garden's visitors and for the creators of new varieties, as it expresses the views of the majority, encouraging visits, observation, knowledge and participation.

THE 21ST EDITION OF THE COMPETITION

This year's competition, in its 21st edition, was held from 7 to 16 May and affected by the health-related restrictions imposed in response to the pandemic. That meant that there were limited places for entering the rose garden and the competition, and visitors were required to register in advance.

The expert jury met up on 7 May, acting in accordance with the regulations in force at the time. It was not possible to have an international jury this year.

An online competition format was provided as an exception at this edition to present the new roses and facilitate the participation of the respective expert and citizen juries, who were able to express their opinions through digital procedures.

It should be noted that there were no changes to the evaluations and their results in the two formats, in person and online. Although the rose varieties evaluated were the same, the procedures were different and the results differentiated.

Certainly nothing can replace direct in person observation, perception and evaluation. But for many people, the online format was the only one way in which to take part on this occasion.

It should be pointed out that the results of the in person and online formats of the competition were very close.

Apart from the evaluations of the new varieties, no other complementary activity was held owing to the health restrictions on social gatherings. Only guided visits were made, in accordance with the regulations in force.

The Parc Cervantes rose garden and the roses competition received 5,866 visitors between 7 and 9 May, arranged by previously registering online or at the rose garden itself, reaching the maximum capacity allowed.

ROSES ENTERED IN THE COMPETITION

86 VARIETIES

- Tea hybrid / Grandiflora varieties: 22
- Floribunda / Multiflora varieties: 38
- Landscape / Shrub rose varieties: 11
- GROUNDCOVER varieties: 4
- Miniature varieties: 3
- CLIMBING varieties: 6
